

# BitMapMusic

version 1.0 © 1996 Kurt Kaufman

BitMapMusic is a no-frills, click-and-drag music notation program. Printed output, although limited to the screen resolution, is reasonable enough to read comfortably.

If your computer (especially PPC) complains about being "out of memory", try increasing the minimum requirement to 4096 KB (it is set to 3072 KB by default).

BitMapMusic is "donationware"; if enough people show interest I would be inclined to further develop the program. For instance, it could use "beaming" and "slurring" features. If you find this program useful, please consider sending \$5 to the author:

Kurt Kaufman

## Version History:

1.0 - initial release 12/28/96

Other music-related programs by the same author:

SING! 2.01- create songs for the Macintosh's synthetic voices to sing (shareware).

RandomNotes 1.0 - creates random sequences of notes through user input (free).

KKGames 1.03 - various activities for young children (free).

BitMapMusic may be included on official "info-mac" and "U-Mich" CD-ROMs. All others please contact me first for terms.
