ConcertWareTM+

Version 4

This package contains the greatly enhanced new version of the award winning ConcertWare+ program. You can use this popular music program for FUN, for WORK, and for LEARNING. In fact, EVERYONE can use and enjoy ConcertWare+.

Music Writer

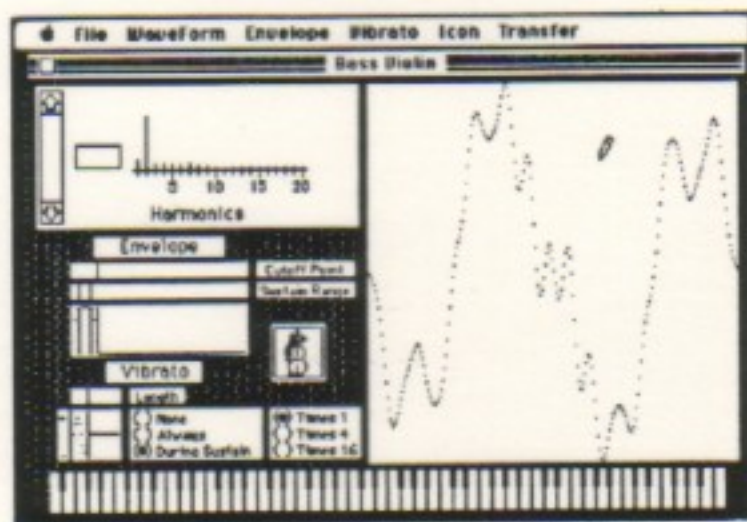

Using the Music Writer you can enter sheet music or original music by using the Mouse or the Macintosh keyboard. Voices may be arranged on up to eight different staves, with chords of up to eight notes per voice. The notation includes slurs, dynamics, repeats, 1st and 2nd endings, selectable stem direction, beaming, note alignment, powerful features for free format text and extensive control over staff setup and positioning. Complete or partial scores can be printed with full support for the ImageWriter, LaserWriterTM, and the Adobe SonataTM fonts. Real time entry may be done using the Record facility which will allow you play a voice into the Macintosh using the Macintosh keyboard while other voices play along with you.

Requires 512K or more memory.
Some color is supported on the Macintosh II.

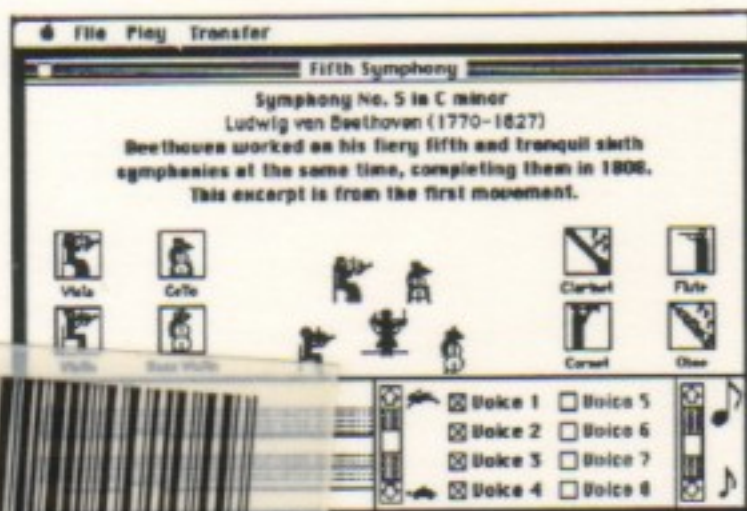

InstrumentMakerTM

The InstrumentMakerTM lets you design your own instrumental sounds or modify any which come on the disk. It includes an Instrument Library which allows easy viewing of the instruments available. A great way to understand and play with the physics of sound.

Music Player

The Music Player combines music from the Music Writer with instruments from the InstrumentMaker and plays back your full length selections through the Macintosh. It can also be played through a home stereo system for optimal sound.

ConcertWare+ Addendum

The disk in this package is double-sided. If you do not have a double-sided disk drive for your Macintosh, return the coupon below with your registration card and we will send you a copy of the program on two single-sided disks.

Sonata Font: The Music Writer program requires a special font called Sonata. Please use the Font/DA Mover to move the Sonata 14 & 20 fonts into the System file you intend to use with ConcertWare. If your Macintosh is larger than 512K and you print on an ImageWriter in "Best" quality, you should also install the Sonata 40 font. If you use a PostScript laser printer, your print quality will be greatly enhanced by using the Sonata PostScript font available from Adobe Systems, Inc. If you use the "Copy Picture" option to move a picture of some music to another program you should use the same System File for both ConcertWare and the other program. If you have a Hard Disk and have trouble using the Sonata font with another Music program, the following three steps should solve the problem:

- 1) Remove all Sonata fonts from your System File using the Font/DA mover.
- 2) Install the Sonata fonts shipped with the other music program into your system.
- 3) Re-install the Sonata fonts as shipped with ConcertWare.

Two new options are in the "Edit Header" dialog. One allows you to specify the margin width of all lines of music. The other allows you to specify an extra indentation before the very first line of music.

Text placed with the T tool now defaults to the "Gap" style which is most appropriate for lyrics. For such lyrics it is best to associate a single word with each note using the Tab key to move from note to note. See pages 28-29 for more information on using text.

You can use the Moving Tool (with four arrows) to increase or decrease the spacing between systems of music by dragging the curl at the bottom of a ruler.

Please send me the ConcertWare+ program on two single-sided disks. I have enclosed my registration card with this request.
