SONG WINDOW

PLAYBACK WINDOW

You can select any instrument from the SongPainter orchestra just by a click of the mouse. Choose from brass, woodwinds, strings, bells, pianos, organs and more.

Here you choose the notes and chords for your compositions. "Click" around the choices until you find the one that fits your song.

This window allows you and SongPainter to control how long each note lasts.

Now paint all the notes you have created for your own software symphony! Listen! SongPainter is playing your song! And the paint possibilities are endless.

With this feature, you're able to pick and choose from your own Song repertoire or you can listen to any of the 37 selections already in SONGPAINTER.
