

Welcome! We've decided to include a bonus on this disk – in addition to your DynoPage, we have included demos of DynoPage 1.0 and Dynodex 2.0. In order to make room for the additional files, we have put everything into an Auto-Unstuffit file which we have named "DynoPage™.sit". You need a hard drive for this operation. To use this Auto-Unstuffit file, you only need about 2700K of free room on your hard drive (2.7 megabytes).

Before you begin this operation, we suggest you lock your DynoPage™ disk and when you have finished, put it away for safe keeping. It's always a good idea to make working copies of your disks to avoid any damage to your original.

1. Copy the DynoPage™.sit file onto your hard drive. You can copy it to a folder or to the top level of your hard drive. (Note: if you try to open the DynoPage™.sit file on the floppy, it will tell you that there is not enough room on the disk!)

2. Double-click on the DynoPage™.sit file.

3. Here's what will happen. Three new folders will be created on your hard drive: DynoPage™, DynoPage Demo and Dynodex Demo.

The DynoPage™ has all the files described in the DynoPage User Manual, although the arrangement of the files and folders may not be the same as in the manual's screen shot. In order to install DynoPage, you'll simply drag the contents of the "Copy Contents to System Folder" into your System Folder and restart your Macintosh.

You'll probably want to make a one-disk backup disk of DynoPage™ and on a separate disk make a disk containing the DynoPage and Dynodex demos. You're free to distribute the Dynodex and DynoPage demo disk to your friends or your local user group or you can upload them to any electronic mail service.

About DynoPage demo: DynoPage demo is a complete working copy of DynoPage 1.0, with a brief tutorial in a Read Me document. The DynoPage demo prints a banner across each printed page. This is the only difference between the demo and DynoPage.

About Dynodex demo: Dynodex demo is a complete working copy of Dynodex 2.0, but you will be unable to save any files that you create. There is a Read Me file explaining many of the features of our flagship software product. Dynodex 2.0 is available directly from Portfolio Systems, from mail order houses and from your local dealer. If you have any questions about Dynodex or would like additional information, you may contact us below.
