

# Presenting ...

# The virtual revolution.

**StrataVirtual 3d, changing the face of photo-realistic presentation in real time.**

StrataVirtual 3d is a revolutionary new walk-through tool for stage & set designers, interior designers, architects, packaging designers or any 3d model developer. Now you can view every dimension of your 3d model in full, photo-realistic detail. Fly-through a new idea in real time. Rotate, zoom and explore.

Once your model has been generated in StudioPro or StrataVision 3d, it can be saved as a virtual object. Through StrataVirtual's navigator, virtual objects are cursor controlled

and viewable through a variable focal length window.

Virtual objects retain all their original modeled characteristics including reflectivity, transparency, bump and texture mapping, color and shadows.

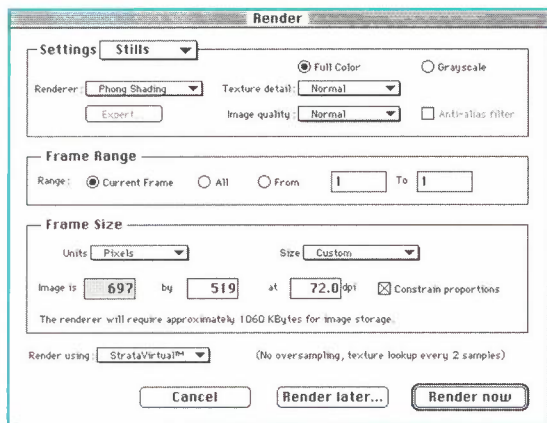

StrataVirtual 3d is available as an extension for StrataVision 3d and StudioPro, enabling a whole new level of 3d productivity. StrataVirtual 3d is the only photo-realistic, real time controllable presentation tool ever produced for the Mac. It's time to join the virtual revolution.

STRATA™  
VIRTUAL 3d

# StrataVirtual 3d is a powerful preview extension for StrataVision 3d and StudioPro.

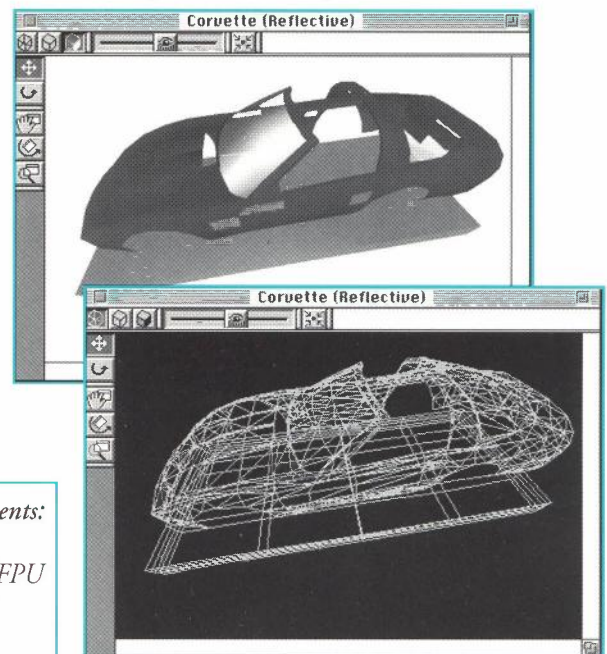

*Create photo-realistic interior and exterior models and then walk through in real time.*

Increase the power of StrataVision 3d and StudioPro with our StrataVirtual 3d extension. Within the rendering options window is the ability to generate a StrataVirtual version of your model. Model attributes such as lighting, textures and color maps are retained and reproduced in a navigable virtual object format. Each virtual object you create is loaded and manipulated in full photo-realistic color, anti aliased in custom sizeable windows. Change viewing orientation of the object easily and in real time. Macintosh-based fly throughs have never been easier to produce and preview.

*View your virtual objects in either full color or wire frame.*

**System Requirements:**  
System 7.0+  
.030 or higher w/FPU  
8 meg RAM  
Hard Drive
