

GAME INSTALLATION AND SETUP (MACINTOSH)

There is a READ ME file on your disk one with any revisions to these instructions if they were required. Please review that file before proceeding.

Vengeance of Excalibur will run property on any Mac II system with 4 Megs of RAM and a 256 color monitor. The game requires a hard disk, and System software 6.0.7 or greater. All game functions can be commanded with the mouse, with optional key commands available for many game functions.

NOTE: You must have at least two megs of free memory to run Vengeance of Excalibur. To find out how much free memory your system has, choose "About the Macintosh" under the Apple menu.

To install Vengeance of Excalibur on your hard disk, simply:

- 1.) Drag the VENGEANCE. SEA, and DDEExpand™ icons from disk ONE.
- 2.) Double Click on the VENGEANCE.SEA icon.

COPY PROTECTION:

Vengeance of Excalibur comes on fully copyable diskettes. You may make backups as you wish. In addition, there is no manual based copy protection for Vengeance of Excalibur on the Macintosh computer. The decision to not include any copy protection on the game was not made lightly -- as a company we must weigh the needs of our customers that do not want the hassle of copy protection against the potential loss of revenue due to illegal copying and distribution of our software. In this case, we decided to serve the majority of the people in the hopes that each individual who paid for the game would refrain from the temptation of giving it to his or her family and friends.

(800K) Double Density Drive Owners: To receive an 800K disk set for Vengeance of Excalibur, please send in a copy of your receipt to Virgin Games Customer Service, 18061 Fitch Ave., Irvine, CA 92714.
