SYMANTEC.

April 24, 1996

Dear Subscription Customer,

We are extremely pleased to be providing you with the first release of Symantec Café for Macintosh. Café is a standalone, professional Java development environment based on the award-winning Symantec Project Manager. It has been designed to provide leading-edge Java development capabilities.

Symantec Café for Macintosh offers an unrivaled feature set, and professional developers such as yourself will find that you are able to use state-of-the-art tools for Java development. Café includes:

- An integrated graphical class browser
- fast native Java compiler (up to 12 times faster than Sun's)
- a full-featured project manager
- professional source-code editor
- Café Studio - visual tools for graphical creation of Java-based forms and applets
- full support for AppleScript and AppleEvents
- Over 90 sample applets, Introduction to Java Programming and Java language reference
- 1 year free access to Symantec Café website where patches and updates can be obtained as soon as they become available.

By mid-May we will be offering the following additional features to Symantec Café:

- A full-featured debugger providing professional debugging capabilities
- Just In Time Compiler to significantly speed up the execution of Java applets
- 68K support

If you are currently enrolled in the Symantec Subscription for Macintosh you will receive these additional feature updates via your regular subscription CD. However, if you are not currently enrolled in the subscription or would like to have access to the website to download patches and updates as soon as they are available, then you may purchase Symantec Café for Macintosh for $99.95. Café may be purchased through resellers or directly through Symantec. Go to http://cafe.symantec.com for more information.

We hope that you enjoy working with this product and look forward to the exciting future of Java development tools.

Sincerely,

Symantec Macintosh Development Tools Team
