

Introduction

This document provides the characters-per-pica measurements for the typefaces included on this CD-ROM. You can use the characters-per-pica measurement to determine whether text set in a specific typeface will fit within an allotted space. You can also use the measurement to compare the widths of different typefaces. To calculate the number of lines in the final typeset document, follow these steps:

- 1 Determine the total number of characters, including word spaces, in the document.
- 2 Determine the desired line length in picas.
- 3 Multiply the line length by the characters-per-pica measurement for the desired typeface and size to obtain the characters-per-line value.
- 4 Divide the total number of characters in the document by the characters-per-line value to obtain the total number of lines in the final document.

***Note:** The characters-per-pica measurement is an approximation and may be affected by other factors, such as the page layout program you are using.*
