FONTASTIC PLUS

FONTASTIC™ PLUS

FONTastic Plus is the most powerful bitmap font editor available on the Macintosh™. Use it to customize any existing character set by adding your own logos or special characters, create fonts for foreign languages, or apply your creativity to create totally new typefaces. FONTastic Plus makes standard bitmap fonts which work with all Macintosh software. Advanced features like variable size fatbits, four levels of undo, a background editing plane, and the capability to edit several fonts concurrently make font editing easy.

Characters or parts of characters may be flipped or rotated to quickly make other characters. Shuffle characters with cut-and-paste to define your own keyboard arrangement. Editing tools include a pencil, eraser, line, filled box, and filled oval or circle. Full character styling abilities include bold, italic, outline, shadow, underline, expand, condense, and invert. Print samples are available at any time during font development. Fonts may be scaled up to the Macintosh limit of 127 points high by 254 points wide, with independent horizontal and vertical scale factors. An integrated font mover makes installing your fonts as simple as cut and paste. Using Apple's new NFNT-type fonts allows over 16000 font families, so font numbering problems are now solved.

FONTastic Plus supports kerning pair and fractional character width specification, so ImageWriter LQ or LaserWriter® II SC fonts can now be defined to the highest typographical standards. The kerning pair tables of any PostScript® font may easily be modified or extended. Zero width characters make it easy to handle foreign language accents or complex logos.

FONTastic Plus runs on the Macintosh Plus, 512K Enhanced, SE, and II. Requires 800K internal or 400K external drive. Not copy protected.
