

Uninvited.

Macintosh™

Quick Reference Card

Hardware Requirements

You need a Macintosh or Macintosh+ with at least 512K of memory. A second disk drive, although not required, is recommended.

Loading

Insert the disk **Uninvited One** into the internal disk drive on your computer. If you have two disk drives, insert **Uninvited Two** into the external drive. If you do not have a second disk drive, you will be prompted by the computer when you need to swap disks. Turn on the computer. The program will load and begin automatically.

Saving Games

You should **not** save any games in progress to either **Uninvited One** or **Uninvited Two**. Both disks are quite full, and you will probably experience difficulties if you fill up what space is left with saved games. You should have a separate storage disk to use for saves.

Using a Hard Disk

It is possible to install the files from **Uninvited Two** onto a hard disk. Simply copy the entire contents of **Uninvited Two** onto your hard disk. Note that if you are using Apple's HFS file system, you will need to place the files in the root directory. Start your computer normally. When you see the desktop, insert **Uninvited One** into the internal drive and double-click the **Uninvited** icon. The game will run using the graphics and sound files from the hard disk. Although **Uninvited** runs primarily in RAM, you may obtain some execution speed increase from this process.

NOTE: **Uninvited One** is copy-protected, and as such, can neither be copied nor installed onto your hard disk. **Uninvited Two** *should* be backed up and the original put away for safekeeping.

Apple System Updates

We have included the newest system files available on the **Uninvited One** disk. You should not install new system files on this disk, as it may make the program unusable.

Macintosh Menus

In addition to the **File** menu described in the manual, the Macintosh version of **Uninvited** also uses the following menus:

Edit		The Edit menu is used to interact with the desk accessories.
Undo	⌘Z	
Cut	⌘K	
Copy	⌘C	
Paste	⌘V	
Clear		

For instance, if you have a shaky memory, you can **Copy** and **Paste** the text from the text window into the Scrapbook or Notepad so you won't forget important details.

Special		Straighten up the contents of a window. Mess up the contents of a window.
Clean Up	Mess Up	

Use **Clean Up** if a contents window is too messy. Use **Mess Up** if you think it's too neat.

Font	Changes the font used for all text displayed.
------	---

You can use this to change the font to anything you want. The text will reformat to suit whatever font you choose.

FontSize	Changes the size of the current font. Only sizes which are in the system file will be displayed.
