"Draw it again, Sam..."

"Draw it again, Sam..." is a practical graphics program for the Macintosh. Rich in features yet easy to use, "Draw it again, Sam..." is a valuable addition to your toolbox of Macintosh graphics packages. Features like libraries and layers make imaginative and precise illustrations possible, even for users with little artistic ability.

You can store up to 250 images in a library, whether drawings, paintings, or text. These images are instantly available just click on the icon and click on the screen. Or select the image by name from a menu. You can import images from clip-art libraries or make your own. And you can create as many libraries as you want. If your work involves using the same set of graphic images again and again, our libraries are just what you need.

Create the usual drawing objects, of course. Then have a free hand in editing arcs. Use parallel lines to create tables and grids. Choose between ten polygon smoothing levels. Double-click on any object to see that object's characteristics and to modify them. Use grids, mouse coordinates, eleven zoom levels, and user-settable rulers to manipulate objects with precision. Create a drawing area as large as you want. Use QuickDraw color, patterns, and transfer modes to create a wide variety of special effects.

Imagine a set of ten transparent drawing pages, one on top of the next. Drawing on one layer does not affect any of the others, so you can overlay detail precisely upon detail. Use standard backgrounds, since you can save each layer as a separate file, if you wish. Make spot color separations, because you can print each layer (color) separately, while guaranteeing alignment with our registration marks. Easily change work areas from layer to layer; paste or transfer objects between layers.

Create one large paint object, or many individual small paint objects. Place paint objects behind or in front of draw objects or other paint objects. Use transfer modes, patterns, and colors to create special effects with these combinations. Create your own paint brushes and spray can shapes by selecting library items of any arbitrary shape. Get true random distribution from our spray can, which offers three flow rates and several feathering patterns for fine touches. The paint bucket has adjustable fill intensity, to create muted fill patterns. Best of all, switch from draw to paint and back again without any bother. The computer creates and extends the paint objects as you paint.

"Draw it again, Sam..." runs on the following computers: Macintosh 512 Enhanced, Macintosh Plus, Macintosh SE, and Macintosh II.
