# If you own a 512K Mac or Mac Plus, you must own FULLPAINT™

When Apple released the 128K Macintosh™, MacPaint™ was a great showcase for the machine. But times have changed, and the more powerful Macs of today and tomorrow need more.

Now FULLPAINT is here, an amazing four-document, full-screen painting program for the 512K Mac and beyond. FULLPAINT is 100% upwardly compatible with MacPaint, and adds a host of new features that today's users expect. There is no other program that puts this much graphics power into the hands of Mac owners. Not one.

For starters, the entire screen is now available for painting; you'll never feel trapped by fixed window sizes again. Couple this flexibility with 'floating' tool and pattern palettes which can be moved anywhere on screen or hidden, and you have a program which redefines the Mac's graphics potential.

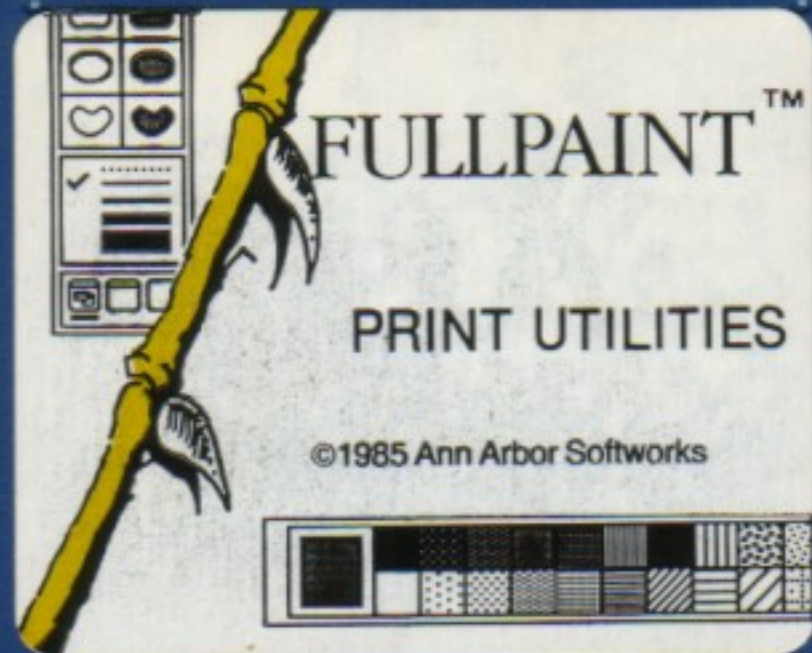

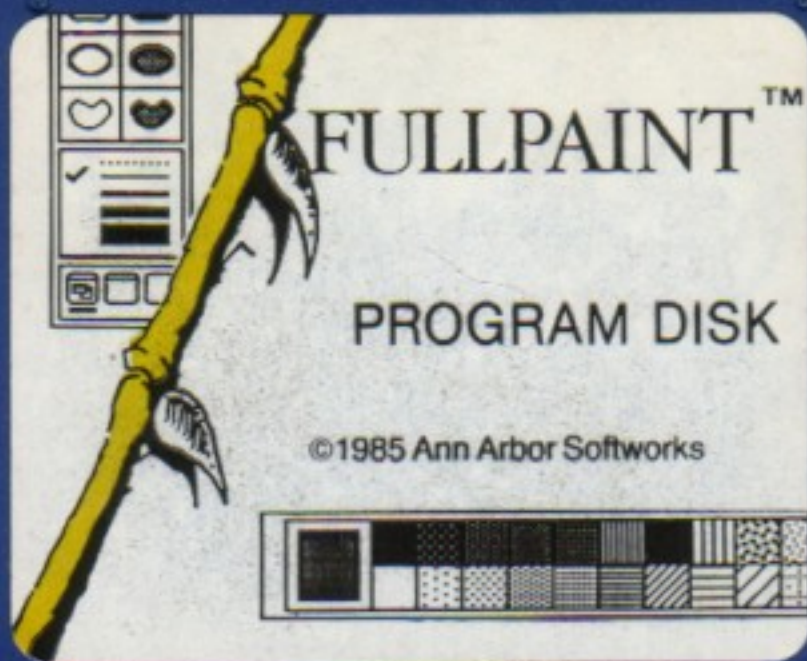

More FULLPAINT features:

- Up to four documents can be opened simultaneously, allowing you to cut-and-paste full-page images in the blink of an eye.
- Images can be Rotated, Skewed, and Distorted using built-in commands, and pseudo 3-D effects can be produced with the Perspective tool. You don't need to buy costly add-on products with FULLPAINT.
- For precise applications such as drafting and desktop publishing, the pop-up rulers and MouseSpot™ display show you the exact position and dimensions of the work in progress. Available drawing scales include inches, centimeters, pixels, points, and picas. In addition, the MouseCrawl™ scaling feature makes pinpoint cursor positioning easy.
- Documents can be printed at various resolutions, from 25%, wallet-sized reductions to 400%, wall-sized posters. Also included is the LaserPrint™ application, which prints full-page, magazine quality images at 150 and 300 dots-per-inch on the Apple LaserWriter™.
