

SIMM Stack 4.7 Read Me

October 1995

General Information

The SIMM Stack contains memory configuration information for Macintosh computers and LaserWriter products.

The SIMM Stack requires HyperCard version 2.2 or greater in order to function properly. A standalone version which does not require HyperCard is also posted.

What's New on Version 4.7

The following changes appear on SIMM Stack 4.7:

- Added new Power Macintosh and PowerBook products.
- Corrected LC550 VRAM to 1 MB, not 768k.
- Corrected Ilvx VRAM configuration depending upon CD ROM installation from Apple.
- Corrected maximum supported PowerBook 500 series RAM expansion module.
- Corrected Power Macintosh 5200 memory speed from 70 ns to 80 ns.
- Added support for 1 and 2 MB SIMMs to the Macintosh 630 family.
- Merryxmas virus prevention added.
