

----- The MagicField 1.0 -----

This is a nice stuff for hypercard users to add to their stacks something interensting: a field that zoom in or out that can be handled by a script.

-- Compatibility --

The MagicField 1.0 should work on every Mac that can use HyperCard 2.1. I think it should work on most of all version of Hypercard as the scripts used in The MagicField 1.0 are probably common to every version but I' m not sure of it. I couldn't test it on older version of Hypercard because I don't have any of them. I really don't know if it works on HC 2.2, try it and let me know.

-- Documentation --

All the documentation is in the stack as an hypertext including

1) What Magicfield 1.0 is? 2) How can I use it? 3) How should I install the MagicField 1.0? 4) Syntax 5) Example.

--- Legal stuff --

The Magicfield 1.0 is not warranteed for any use. I'm not responsable for any damages incurred through use or misuse of The MagicField 1.0. The package is given as it is.

-- Registration --

This stack and all inside it (scripts, sound etc.) are a giftware that means if you use it more than one time you should send me a money-gift (what you think my work on this should cost) in US dollar, German Mark or Italian Lira for any kind of use (commercial or not).

As it is a shareware, feel free to distribuite it over any kind of channel (internet, bbs, friends, cd-roms, etc.) but DO NOT CHARGE A FEE FOR IT.

If you read this and you have paid anything before using the package and the support of this program was yours or free, you have been stolen.

Have fun !!!
