Web Devil 4.7:

- Added support for downloading JavaScript.
- Added support for user-entered URL's with spaces in them.
- Fixed problems with images being downloaded when the Get Images preference was off.

Web Devil 4.6.1:

- Fixed problems scanning for links with web pages containing unbalanced quotes.

Web Devil 4.6:

- Added support for some types of proxies.
- Added batch URL downloader from a text file listing of URL's.
- Improved ability to extract URL's and e-mail addresses from many huge files with limited memory.

Web Devil 4.5.2:

- Fixed problems with HTML parsing when improperly quoted strings were encountered.

Web Devil 4.5.1:

- Added support for multiple, comma-delimited name filters to make them more useful.
- Added Manipulator droplets to package to help organize stuff you download.

Web Devil 4.5:

- Added host name generation in HTTP header for virtual multihoming servers and fix lots of unreachable sites.
- Added download filter for names (contains, begins/ends with, etc...).
- Added download filter for sizes (greater/less than, is exactly, etc...).
- Added support for re-linking downloaded pages for offline browsing (may not work on some sites).

Web Devil 4.0:

- Added e-mail address extractor (drag files or folder into window).
- Added URL extractor (drag files or folder into window).
- Completely rewrote HTML parser to make it much faster and more accurate:
 - Links not surrounded by quotes are now recognized.
 - Link scanning is now almost instantaneous.
 - Links with weird characters, linefeeds, tabs, etc. are now recognized.
- Added import of bookmarks from links HTML files.
- Added export of bookmarks as a normal HTML file (ready to view in browser).

Web Devil 3.6:

- Added support for customizing the user agent string.
- Several minor bug fixes and improvements.

Web Devil 3.5:

- Added bookmark management system to keep track of URL's, names, and passwords.
- Added a per-window download prefs dialog so each window can have unique settings.
- Changed the interface around to better comply with the Appearance Manager.
- Fixed a bug when parsing links starting with a slash (/).
- Fixed a bug that prevented it from working with MacTCP.
- Lots of other minor bug fixes and improvements.

Web Devil 3.1.3:

- Fixed a bug that prevented pasting in a URL.

Web Devil 3.1.2:

- Fixed problems which results in corrupt downloads.
- Other minor bug fixes and improvements.

Web Devil 3.1.1:

- This version never really existed, but because of the way Stuffit Expander renames duplicates, it appeared as though it did.

Web Devil 3.1:

- Fixed numerous bugs to greatly increase stability.
- Fixed problems with URL's containing "./" and "../".
- Improved server redirection handling.
- Major increases in speed when downloading larger files.
- Made link extraction more reliable.
- Added support for downloading BASE links.
- Added support for downloading EMBED SRC links.
- Added support for encoded URL's.
- Minor cosmetic changes (additions for the Appearance Manager, etc...).
- Added command-key for bringing up the Preferences dialog.
- Fixed white background problem when in 16 & 24-bit color.

Web Devil 3.0:

- Added support for the downloading pages with frames.
- Added option to only download files from the server that are newer.
- Added option to only get files from the same directory or below.
- Made the link searching more robust.
- Moved many options into the preferences dialog so they are persistent.

- Made the skip duplicates option much more efficient.
- Added support for retrieving HTTP-EQUIV links (eg. forwarding pages).
- Improved memory usage when downloading large files.
- Window title now changes to the URL being downloaded.
- Added preference for setting the download folder.
- Added preference for setting the file mappings.
- Put back the Launch Internet Config button in the preferences dialog.

Web Devil 2.0:

- Added the ability to do completely recursive downloads (ie. it will follow links).
- Added support for logging actions to a file.
- Added recursive download depth limiting to limit how far it recurses.
- Added the option to only download files from the same server as the starting web page.
- Added a recently downloaded web pages popup menu for quick access to the last few pages you've downloaded.
- Added an option to create the full web page folder hierarchy to more accurately reflect the web page.
- Added an option to store a complete URL to the downloaded file inside the file's Finder comment field.
- Added an option to skip files that already exist in the same location in the destination folder.
- Now allows the timeout to be set by the user instead of being forced to 3 minutes.
- Now creates a Web Devil Downloads folder into which it places all downloaded files.
- Removed the warning on launch if Internet Config couldn't be found.

Web Devil 1.0.1:

- Fixed a bug that made using it with MacTCP difficult (to say the least).

Web Devil 1.0:

- First public release.
