

Baton Mail includes features for those using multiple email accounts.

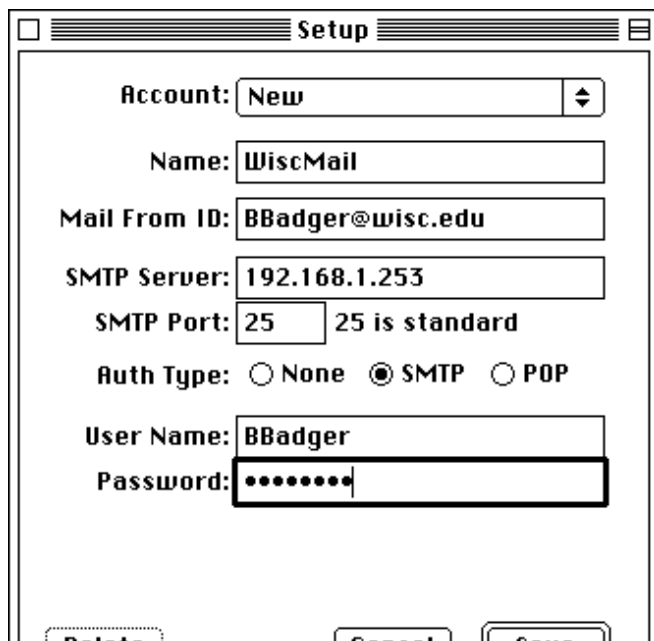

First, leave the "default" configuration blank. Unlike the one-account case, we don't want Baton matching the same thing for every request it receives. Here's what your Baton Mail "Default" configuration should look like:

The screenshot shows the 'Setup' window for Baton Mail. The 'Account' dropdown is set to 'Default'. The 'Name' field is 'Default'. The 'Mail From ID' field is '*@*'. The 'SMTP Server' field is empty and highlighted with a red box. The 'SMTP Port' is '25' with a note '25 is standard'. The 'Auth Type' has three radio buttons: 'None' (selected), 'SMTP', and 'POP'. At the bottom, there are three buttons: 'Cancel', 'Reset', and 'Save'.

Create a new account in Baton Mail. Name the account with a descriptive name. Fill in your email address under "Mail From ID". Use the corresponding IP address from sTunnel.conf for the "SMTP Server", and leave "SMTP Port" at 25. "Auth Type" is SMTP. Fill in your User Name and Password:

This will ensure that Baton Mail connects to the right Helper Address and sends the correct Username and Password for each of your SMTP AUTH accounts.

The screenshot shows the 'Setup' window for Baton Mail with a new account configuration. The 'Account' dropdown is set to 'New'. The 'Name' field is 'WiscMail'. The 'Mail From ID' field is 'BBadger@wisc.edu'. The 'SMTP Server' field is '192.168.1.253'. The 'SMTP Port' is '25' with a note '25 is standard'. The 'Auth Type' has three radio buttons: 'None', 'SMTP' (selected), and 'POP'. The 'User Name' field is 'BBadger'. The 'Password' field is filled with dots and highlighted with a red box. At the bottom, there are three buttons: 'Cancel', 'Reset', and 'Save'.

Repeat this procedure for each account you'll be sending mail from. Just keep choosing "New" from the plop-down in Baton Mail and filling in the boxes until you've done them all. Make sure you save changes!

Set up your email client, using the various IP addresses you defined in your sTunnel.conf for the POP servers. Use 127.0.0.1 for the SMTP server on all accounts. Baton Mail will be smart and use the correct password for each as you set it in the varied Baton settings screens.
