# MindWrite

Word Processing, Outlining and Document Management

MindWrite can display a collapsed "outline view" of a document in one window with detail expanded in others.

MindWrite can help you **complete a writing project in half to a third the time** it takes in your current word processor. MindWrite is designed for people who write:

- proposals      ▪ specifications      ▪ lectures
- business plans      ▪ contracts      ▪ copy for desktop publishing

MindWrite focuses the power of the Macintosh on the creative part of the writing process, freeing you to write the way you think. You'll capture ideas and details as quickly as they occur, then swiftly organize them into a clear, persuasive structure. As your document takes shape, you'll polish it with MindWrite's unmatched built-in proofreading and revision-tracking tools. MindWrite saves you time with:

- **Powerful text import and export** to make the most of MacWrite, Microsoft Word, and ThinkTank documents created on the Macintosh, or with the **MindWriteExpress** option, documents created on other computers such as the IBM PC and DEC VAX.
- **Built-in spell checking and proofreading** to insure your work is letter-perfect.
- **Unlimited document windows** to speed text transfers.
- **Hierarchical structure** to show relationships between topics.
- **Text movement by mouse** to reorganize topics without cut and paste commands.
- **Collapsed text** to focus your attention on the big picture.
- **Auto-renumbering labels** to save time when you rearrange sections and lists.
- **Automatic revision tracking** to speed review cycles.
- **Selective word count** to simplify writing to fit.
- **Powerful select, search, and sort** to make the most of everything you write.
- **Macintosh fonts, styles, and color graphics** for professional presentation.
- **PageMaker filter** that lets PageMaker recognize and place MindWrite documents in your layouts.

*Multi-selection lets you act on many text blocks simultaneously—cut, copy, search, format or print.*

*MindWrite lets you open as many windows as memory allows—on one document or many. Zoom buttons instantly resize windows to convenient sizes and locations.*

*"MindWrite's outstanding feature is its effortless integration of outlining and word processing, an integration that Word, for one, has never dreamt of. Add to this its multiple windows with their slick tiling, its sophisticated search and select options, its cumulative clipboard and its mark-and-gather, and you have a program that will be a major hit with writers, managers and others who work with words and ideas."*

—Ted Silveira  
MacUser Magazine

## SYSTEM REQUIREMENTS

- Macintosh 512E, Plus, SE or II with 800K disk drive
- Second 800K disk drive or hard disk
