

Because
you're on a
network...

Features

Password protection ensures security, and network optimization promotes speed. User shut downs are intercepted until the backup is complete. Fully integrates with Retrospect for complete control, verification, and reporting. No wonder Retrospect Remote received the MacUser Editors' Choice Award.

Easy to Use

Just drop a Remote INIT/control panel in the system folder of each Macintosh you wish to back up and restart. The Remote Macintosh will simply appear as an additional source and can easily be added to your backup script.

Available Worldwide

Remotes are available separately in "Remote 10-Packs" and "Remote 50-Packs" at your local dealer, through mail order, or wherever Macintosh software is sold.

make sure you're using Remotes:

You'll find that backing up other Macintoshes on the network is easy. Not only will your company's data be secure and your backup drive better utilized, but the more Macintoshes you back up, the more efficient the process becomes (since redundant data is only backed up once.)

And if you run out of Remote activator codes:

You can get more, just by purchasing Remote 10-Packs or Remote 50-Packs. The practical upper limit on an Ethernet network is about 100 Remotes per copy of Retrospect.
