# QUICK REFERENCE

EQUILIBRIUM
DE BABELIZER® 3

The BatchList Window
This window provides total access and control of BatchLists. It is possible to have a maximum of two BatchList Windows open simultaneously.

The BatchList List - select and load a BatchList from the current list

Delete - delete the active BatchList from the current list

Export Text List - export the active BatchList as an HTML file, or hold down Option key as you click on the icon to export the BatchList as a standard text file
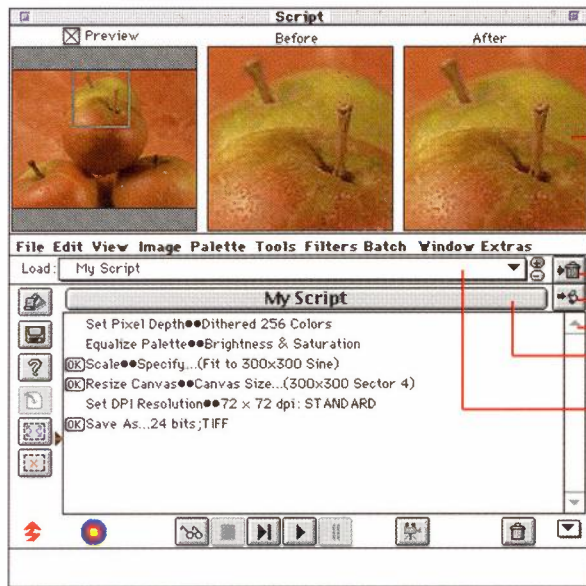

The Preview/Info Window - when cursor is placed over file name, that images file's preview is displayed (if file contains a PICT preview resource) this button is the on/off toggle

New
open a new, blank BatchList

Save/Save As (press option key to Save As)
save the active BatchList

Add Files
add files to the BatchList using a dialog

Add URL
add an HTML file to the BatchList using its URL

Help
open the Help window

Revert
revert the active BatchList to its original state

Select All
select all the items in the BatchList window

Select None
deselect the selected items in the BatchList window

Sort
sort items alphanumerically in ascending order; hold down Option key and click icon to place them in descending order; hold down Control key to reverse the current order

Check
check for missing items

Open
open the selected files

Slideshow
execute a Batch Automation Slideshow process

Save
execute a Batch Automation Save process

SuperPalette
execute a Batch Automation SuperPalette process

Catalog
execute a Batch Automation Catalog process

Thumbnails
execute a Batch Automation Save process

Trash
delete a selected item from the BatchList

(press option key with any of these to open their dialogs)

The Script Window
This window provides total access and control of the current script list.

The Script Preview - when preview box is checked, the effect of the active script on the active image is displayed

Menu Bar - insert any of DeBabelizer's menu commands into the active script

Delete - delete the active script

Export AppleScript - export the active script as an AppleScript text file

Rename - rename the active script

The Script List - select and load a script from the current script list

New
open a new, blank script

Save/Save As (press option key to Save As)
save the active script

Help
open the Help window

Revert
revert the active script to its original state

Select All
select all the items in the Script window

Select None
deselect the selected items in the Script window

ActionArrow - drag onto an open image or BatchList window to apply the script to the image/contents of BatchList; drag onto the toolbar Open button to automatically process all open images

Target - drag an image file from a Batchlist window or the Finder and drop it onto this icon - opens the image and applies the active script

WatchMe Recorder
records all the operations you apply from the menu bar to the active script

Run Script
run the active script

Run Operation
execute a single script operation

Pause Script
pause a running script

Stop Script
abort a running script

Update Display
update the active image's display after each applied operation in the running script

Trash
delete an item from the active script

The Main Toolbar

DeBabelizer's main toolbar provides quick access to some common menu commands and to the Paint Tools.

Toolbar Commands

Open
open an image or animation/video file

Save
save the active image or animation frame

Undo/Redo
reverse the last executed operation

BatchList Window
display the BatchList window

Script Window
display the Script window

Help Window
display the Help window

Anchor/De-anchor
toggle the anchor state of the main toolbar
